*Scope 3 emissions were calculated based on the "Basic Guidelines on Accounting for Greenhouse Gas Emissions Throughout the Supply Chain" by the Ministry of the Environment. Emissions of some main business partners are calculated using their respective emission intensity according to publicly available information and individual questionnaires.

*Category 1: GHG emissions of individual construction sites with contract amounts exceeding 100 million yen supervised by the Construction Supervisory Department Headquarters were calculated, emissions of the remaining construction sites were calculated based on emission intensity.

*Category 4: We calculated emissions of main business partners using the fuel method and ton-kilometer method based on individual questionnaires and calculated levels of other business partners using emission intensity.

*Category 11: We prepared energy use scenarios by product and calculated emissions using emission intensity.

*Category 12: We prepared end-of-life scenarios by product and calculated emissions using emission intensity.

*1: Scheduled to be released at the end of September.
